Request for USGS to Perform Specific Sampling Activities at Rocky Flats Plant

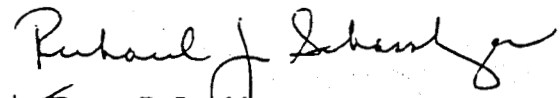

Jerri J. Adams, Director, Contracts and Services Division

The Environmental Restoration Division (ERD) of the Rocky Flats Office is in agreement with EG&G Rocky Flats concerning the desirability of requesting the United States Geological Survey (USGS) to perform some very specific sampling activities for the Department of Energy. This effort is in support of required environmental studies directed by the Interagency Agreement that DOE signed along with the U.S. Environmental Protection Agency (EPA) and the Colorado Department of Health (CDH).

The IAG resulted from Rocky Flats' status as a Superfund site and directed, in part, that DOE investigate the water and sediments of Great Western, Standley Lake, and Mower Reservoirs. The USGS is uniquely qualified to perform the work DOE needs, has performed this type of work in the past as an honest broker among the affected parties, and is held in high regard in the scientific and public communities.

ERD requests that the Contracts and Services Division help obtain the USGS' expertise under the existing Memorandum of Understanding (MOU) between the DOE and USGS. The IAG imposes severe time constraints on DOE, and DOE can be fined for not meeting the IAG schedule. Therefore, ERD believes that work under this task order must be authorized prior to June 1, 1992. Please contact me immediately if this deadline is not achievable.

Attached is a proposed Statement of Work incorporating DOE comments and a letter from EG&G to DOE, RFO specifying the work required. If you have any questions or if ERD can help expedite your efforts, please do not hesitate to call Robert H. Birk at extension 5921.

Frazer R. Lockhart
Director
Environmental Restoration Division
